

SVR WELLNESS PARTNER MODULE

Reiki / Holistic Wellness Integration Packet

Version 1.4.2 Planning Packet

Prepared for partner review and approval discussion

CONFIDENTIAL DRAFT - NOT PUBLIC RELEASE MATERIAL

Prepared By	Project	Date	Status
Ronald Chadee / SVR Poker	SVR Poker / Scarlett Holding LLC	June 07, 2026	Planning / partner review draft

Important Approval Note: Any partner name, website, image, logo, likeness, personal story, or branded material must remain in review status until the partner gives explicit approval. If approval is not granted, the module must be converted immediately to a neutral SVR wellness placeholder.

Table of Contents

- 1. Executive Brief
- 2. Partner Email Draft
- 3. Proposed Partner Packet Overview
- 4. Reiki Storefront and Private Room Plan
- 5. Hologram Video Strategy
- 6. User Journey and Marketing Funnel
- 7. Group Session and Business Meeting Model
- 8. Nationwide Partner Recruiting Network
- 9. Booking, Database, and Profile Structure
- 10. Partner Admin Dashboard
- 11. Site Adaptation Requirements
- 12. Game Adaptation Requirements
- 13. Approval, IP, and Removal Safety Rules
- 14. Implementation Roadmap
- 15. Materials Needed from Partner
- 16. Next Steps Checklist

1. Executive Brief

SVR Poker is being developed as a modular social VR poker platform with private destination rooms, storefront hubs, sponsor modules, community features, and future booking systems. The Reiki / wellness module is designed as a professional partner experience that can support education, client engagement, live group sessions, booking, recruiting, analytics, and nationwide partner operations.

Primary objective: Create a polished review packet and future-ready system plan for a wellness partner to evaluate, approve, and potentially operate as a scalable nationwide wellness network inside the SVR ecosystem.

Goal	Practical Result
Presentation quality	Make the partner module look credible, respectful, polished, and contract-ready.
Modular safety	Allow partner information to be swapped, approved, or removed quickly without breaking the game.
Nationwide growth	Prepare for state-by-state partner profiles, remote sessions, mobile services, and booking routes.
Admin control	Give the partner an admin view for leads, bookings, analytics, provider approvals, and session activity.
Marketing balance	Build desire first, then offer exploration incentives without making the experience feel like a coupon push.

2. Partner Email Draft

Use this email as the first professional outreach. Verify the exact spelling of the partner name, company name, website, and title before sending.

Subject: SVR Wellness Partner Module Proposal

Dear Mrs. Royston,

I hope you are doing well.

I am reaching out to introduce a wellness partnership concept we are preparing inside SVR Poker, a social VR poker and entertainment platform being developed with private destination rooms, sponsor hubs, community features, and future booking/partner systems.

One of the featured concepts is a dedicated Reiki / holistic wellness module. The idea is to create a polished virtual storefront and private wellness room where users can learn about Reiki, view presentation materials, enter a private meditation-style space, and eventually book or join guided sessions. This would not be treated as a simple advertisement. The goal is to create a professional, respectful, and scalable wellness experience that can support education, client interest, group sessions, and future partner expansion.

The proposed module can include:

- A lobby-facing Reiki storefront inside the SVR virtual hub
- A private Reiki / meditation room for guided sessions
- Hologram-style presentation videos

- Educational panels for Reiki symbols, tuning, and wellness services
- Optional group session support for users in different states
- Future booking and referral tools
- A private admin dashboard for reviewing leads, interest, bookings, analytics, and partner activity
- A possible nationwide partner structure for approved Reiki masters, massage therapists, or wellness providers

I also want to be clear that your name, likeness, website, logo, or branded materials would not be used in a final public-facing way without your approval. The current goal is to prepare a professional presentation concept for your review. If you are interested, we can refine it together. If you are not interested, the module can be converted back into a neutral SVR wellness placeholder immediately.

The long-term vision is to give you a structured wellness partner system where clients can discover your services, attend virtual introductions or group sessions, and eventually connect with approved providers by region or state. This could support both wellness education and business development while keeping the experience organized, respectful, and professional.

I would appreciate the opportunity to show you the concept, explain the structure, and get your feedback. If this is something you would consider, I can send over the full proposal packet and arrange a time to review the demo with you.

Respectfully,

Ronald Chadee

SVR Poker / Scarlett Holding LLC

3. Proposed Partner Packet Overview

The full partner packet should show that SVR is presenting a serious business opportunity, not a casual in-game ad. The packet should explain what the partner receives, how users move through the experience, how bookings and leads are handled, and how approval/removal protections work.

Packet Section	Purpose
Cover letter / email	Professional invitation to review the demo and discuss partnership.
Executive summary	Short explanation of SVR Poker, the wellness module, and the business opportunity.
Experience overview	Shows lobby storefront, private room, holograms, educational panels, and session routes.
Marketing plan	Explains how desire is built before incentives are introduced.
Group sessions	Shows how users from different states can enter a private session room.
Nationwide network	Explains state partners, practitioner profiles, service areas, and recruiting.
Admin dashboard	Shows booking leads, analytics, partner management, and operational control.
Approval safety	Explains that partner branding stays review-only until formally approved.

4. Reiki Storefront and Private Room Plan

The Reiki module should remain two-layered: a lobby-facing storefront hub and a separate 3D private room. The storefront sells credibility and curiosity. The private room delivers the actual experience.

Layer	What It Contains	Rules
Lobby storefront	Glass/storefront frame, partner introduction, red carpet/ropes, approval status, portal button, short call-to-action.	Do not overload. Keep it premium and readable.
Private Reiki room	Meditation circle, educational symbols, hologram videos, plants, calm lighting, user reward panel, booking prompt.	Must load in 3D, not as a flat 2D page.
Admin/data layer	Tracks visits, video plays, booking interest, user state/region, reward redemption.	Private to owner/partner admin. No secrets in public code.

- The existing Reiki storefront hub must not be edited unless explicitly unlocked.
- Partner-specific text, images, videos, logos, and website links must be modular and removable.
- If approval is denied, all partner-specific assets are replaced by neutral SVR wellness placeholders.
- The private room must route through a portal or watch button and must not be embedded as a 2D web page.

5. Hologram Video Strategy

The current hologram video performance issue should be handled by splitting the source video into two smaller, cleaner segments. The split point should be at the black transition between the two parts of the video. Smaller clips reduce decoding strain, improve Quest playback, and make the presentation easier to follow.

Hologram Slide	Purpose	Content Direction
Hologram 1 - Reiki Education	Explain Reiki, symbols, tuning, and the value of entering the room.	Short, clear, calm, educational. Users understand what they are seeing.

Hologram 2 - Partner Background	Introduce experience, services, practitioner history, and why users may want to book or learn more.	Professional credibility without aggressive selling.
---------------------------------	---	--

Technical recommendation: encode both video clips as optimized MP4 files with mobile-friendly bitrate, fixed resolution, and short duration. Load the first clip by default, lazy-load the second clip after the user enters the private room or selects the second slide.

6. User Journey and Marketing Funnel

The marketing approach should make the user want the wellness experience before offering any reward. The chip reward should feel like an exploration credit, not a desperate coupon.

1. User sees polished Reiki storefront in the SVR lobby.
2. User reads a short value statement and sees the private room portal.
3. User enters the private Reiki room.
4. User watches Hologram 1 and explores educational panels.
5. User watches Hologram 2 and sees practitioner/service information.
6. User can request information, join a future session, or book/contact through the system.
7. User can receive an optional play-chip thank-you after spending meaningful time inside the room.

Marketing Element	Positioning
Play-chip incentive	Exploration reward, not a coupon. Example: "Thank you for exploring the Reiki room - 10,000 play chips unlocked."
Booking prompt	Soft call-to-action after credibility is established.
Group sessions	Promoted as premium live guided experiences.
Partner network	Presented as a nationwide access system, not a random directory.

7. Group Session and Business Meeting Model

The private Reiki room should eventually support multiplayer group sessions. This allows users in different states to join the same private room for symbol training, tuning, meditation, or wellness orientation. The same infrastructure can support associate meetings and partner onboarding.

Room Type	Use Case	Features Needed
Group Reiki session	Four to twelve users join a guided session with the partner or approved practitioner.	Private room code, schedule, moderator controls, voice, session timer, attendance tracking.
Business meeting	Partner meets with associates, state coordinators, or new providers.	Round table, presentation screen, notes, invite list, role-based access.
Training room	Practitioner education or onboarding.	Slides, hologram panels, checklist, completion tracking.

Future server planning will be needed for synchronized multiplayer, voice, session state, database writes, and analytics. The module should be designed now so it can expand cleanly once the server is online.

8. Nationwide Partner Recruiting Network

If the partner approves and wants to expand nationally, SVR can structure a state-by-state wellness partner network. The lead partner can review applicants, approve providers, and manage service regions.

Partner Type	Possible Role
--------------	---------------

Lead wellness partner	Owns the module direction, standards, approvals, and training.
State partner	Represents one or more states, manages local provider coverage.
Reiki master	Provides remote or local Reiki sessions.
Massage therapist	Provides local/mobile services when legally and operationally approved.
Wellness practitioner	Offers approved services such as meditation, breathwork, or holistic coaching.
Associate/admin	Helps manage sessions, leads, schedules, and client follow-up.

This recruiting layer should be framed as a professional partner network, not an open unmanaged listing. Every provider should have an approval status, service scope, state/region, and compliance review status.

9. Booking, Database, and Profile Structure

The database should support client inquiries, practitioner profiles, session scheduling, referral tracking, and analytics. No private connection strings, passwords, or secret keys belong inside the public website or game code.

Database Area	Fields / Records
ProviderProfile	Name, display name, service type, state, cities, bio, credentials, approval status, contact method, service radius.
ServiceListing	Provider ID, service title, duration, delivery type, price/status, description, active flag.
BookingRequest	Client name, email, state, requested service, preferred time, notes, referral source, status.
SessionEvent	Session type, host, attendees, date/time, room code, status, completion flag.
LeadAnalytics	Visits, video plays, room entries, booking clicks, state demand, conversion status.
PartnerAdminLog	Admin actions, provider approvals, profile edits, booking updates, session changes.

10. Partner Admin Dashboard

The partner admin dashboard should be role-based. The lead partner should have access to operational data without exposing system-level controls that belong only to the SVR owner.

Dashboard Area	What Partner Can See / Do
Overview	Total leads, new inquiries, upcoming sessions, state interest map, recent activity.
Bookings	View requests, update status, assign provider, export schedule.
Providers	Review applicants, approve/deny profiles, organize by state.
Sessions	Create group sessions, invite attendees, track attendance.
Analytics	Room visits, video plays, booking clicks, reward redemptions, state demand.
Content approval	Review text, images, video, logo placement, and public-facing copy.

SVR owner controls should remain separate: deployment, database secrets, payment activation, system-level moderation, and global analytics.

11. Site Adaptation Requirements

The public site should support the wellness partner module without exposing unfinished or unapproved material. Website changes should be modular and separate from game changes.

Site Area	Adaptation Needed
Public landing page	Keep locked unless approved. Add only safe links to the wellness proposal or contact flow.
Partner page	Create a private or hidden review page for the partner packet and demo links.
Booking interest form	Collect name, email, state, service interest, preferred contact method, and notes.
Admin status	Show admin online/offline through the secure backend, not static fake data.
Store / services preview	Display service previews only. Payments remain disabled until legal/business approval.
Analytics hooks	Track visits, clicks, inquiries, and room-entry interest through the backend.

- No SQL passwords or Stripe secret keys in the website.
- No unapproved partner branding on public pages.
- Use a private review URL or password-protected/admin route for partner approval materials.
- All partner pages must have an immediate neutral fallback if approval is denied.

12. Game Adaptation Requirements

The game must treat each partner module as a removable storefront + private room package. The Reiki storefront remains locked unless explicitly unlocked. The PGA storefront can be rebuilt using the same mother-module structure while using PGA-specific branding/content.

Game Module	Adaptation Needed
Lobby storefront hub	Professional portal storefront with approved signage, call-to-action, and route to private room.
Private Reiki room	Full 3D scene, not 2D page. Hologram slides, meditation ring, educational panels, booking prompt.
PGA storefront	Use mother-module layout pattern; include instructor/profile panel, Drive and Chip/Putt routes.
PGA private rooms	Driving range and chip/putt room must load as separate 3D scenes.
Teleport router	Every storefront must have a stable private route and return-to-lobby path.
Video performance	Split and optimize partner hologram video; lazy-load secondary slide.
Reward logic	Time-gated play-chip reward for exploring the room. Avoid abuse and keep it play-money only.

Debugging requirement: add a module health panel or JSON route map that confirms every private room loads, every portal target exists, and every video asset is reachable before presentation.

13. Approval, IP, and Removal Safety Rules

This section is critical. Partner materials should never be treated as permanent until approved. The module must support immediate removal.

Risk	Protection Rule
Unapproved branding	Use placeholders until approval. Keep all partner branding in a removable config file.
Image/likeness rights	Do not use partner photo/video publicly without consent.
Website references	Do not display external websites unless approved.
Service claims	Avoid medical claims or guarantees. Use wellness/education language.
Payment issues	Do not enable checkout or paid booking until legal/business review.
Contract risk	Use proposal/review language until agreement is signed.

Recommended public label before approval: "Wellness Partner Preview - Awaiting Approval". Recommended internal config state: reviewOnly = true.

14. Implementation Roadmap

Version / Phase	Deliverable	Status
1.4.2 Planning	Partner packet, database plan, admin dashboard plan, site/game adaptation plan.	This packet.
1.4.2A Proposal Pack	Final PDF, email, screenshots, demo links, approval checklist.	Next.
1.4.2B Game Route Audit	Verify Reiki/PGA private scenes load in 3D and all routes work.	Pending.
1.4.2C Hologram Optimization	Split video, encode two clips, add slide switcher.	Pending source video.
1.4.2D Partner Review Page	Private site page for proposal, video, and response form.	Pending.
1.4.2E Admin Prototype	Partner admin mockup for leads, bookings, analytics, provider profiles.	Pending backend readiness.

15. Materials Needed from Partner

- Exact approved name and title.
- Correct business name and website spelling.
- Approved logo and brand colors.
- Approved photo or statement of no photo use.
- Approved video files or permission to edit the current video.
- Approved short bio and service descriptions.
- List of services offered and service areas.
- Booking preferences: email, phone, website form, calendar, or SVR-managed intake.
- Whether group sessions are approved for future testing.
- Whether state partner recruiting is approved for planning discussion.

16. Next Steps Checklist

Step	Owner	Done
Verify exact partner name, brand spelling, and website.	SVR / Partner	
Send professional email and packet.	SVR	
Prepare screenshots or short demo recording.	SVR	
Confirm whether partner-specific materials may remain in review build.	Partner	

Audit game routes: storefront to private 3D room.	SVR	
Split and optimize hologram video into two clips.	SVR / Video editor	
Draft admin dashboard mockup.	SVR	
Draft database profile fields and booking intake form.	SVR	
Schedule review meeting.	SVR / Partner	
Approve, revise, or remove partner-specific materials.	Partner / SVR	

Appendix A - Fast Site/Game Adaptation Manifest

Use this as the working manifest for repo adaptation. It is intentionally conservative and modular.

- Website remains locked unless a site-specific patch is approved.
- Game lobby remains a storefront portal hub.
- Reiki storefront hub remains locked and untouched unless explicitly unlocked.
- Partner content lives in config-driven modules and can be removed quickly.
- Every private room needs a 3D route, a return route, and a loading fallback.
- Video assets must be short, compressed, and lazy-loaded.
- Admin/database features must go through secure backend APIs, not public JavaScript secrets.
- Payments remain disabled until separately approved.
- All partner review content must show review/approval status until approved.
